

Subsequent Installation of Radiator Shutter

(Optional, SA 10218)

Job No.
50 — 4

The subsequent installation of a radiator shutter can be carried out as an optional extra. But the installation is only justified if the car is used for short journeys only and must be protected against cooling off completely in the intervals between journeys. Under normal circumstances, the degree of temperature regulation afforded by the thermostat, which works independently of pressure, will be found perfectly adequate. The necessary parts are supplied together with installation instructions. The complete kit of parts can be obtained from the works under Part No. 000 505 26 01.
