## Removal:

1. Detach the cemented rubber cover from the rocker plate and take it off.
2. Unscrew the rocker plate from the car body and from the front and rear fenders.
3. Detach the cemented sealing strips from the rocker plate and remove the adhesive residue. Remove the Terostat tape.

## Installation:

4. Cement the new sealing strips to the rocker plate at the outside and inside (front and rear) and at the cut-out for the center pillar.
5. Attach Terostat tape along the side member and provisionally screw on the rocker plate and align it.
6. Screw in all fixing screws and tighten them.
7. Attach the rubber cover with adhesive.
